

# CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 1998  
 DateRun: 08/03/1998  
 Experimenters: Jason Marshall  
 ClientType: Name Plate Mfg-Etching  
 ProjectNumber: Project #1  
 Substrates: Aluminum  
 PartType: Coupon  
 Contaminants: Carbon Deposits, Paints, Dirt  
 Cleaning Methods: Immersion/Soak  
 Analytical Methods: Gravimetric

Purpose: To find an alternative cleaner to the Naphtha solvent currently using.

Experimental Procedure: Eight cleaners were selected based on the laboratory's databases and vendor information. Five aqueous cleaners were made into 5% solutions in 500 mL beakers using DI water. These chemistries were heated to 130 oF on a hot plate. The three other chemistries were used at full strength at room temperatures. Prewighed coupons were immersed into the contaminant solution and stacked on top of each other. Coupons were allowed to sit for one hour at room temperature. Before the second weighing was performed, each coupon was allowed to dry completely. The drying was necessary so that an accurate contaminated weight could be recorded. It was also a good way to test the worst case scenario for the contaminant cleaning. Three coupons were placed into each cleaning chemistry for 5 minutes using stir bar agitation. Coupons were rinsed with tap water at 120 oF for 30 seconds. Coupons were allowed to air dry. After drying, a final clean weight was recorded. Cleaning efficiencies were calculated.

SUBSTRATE MATERIAL: Aluminum 3003

CONTAMINANTS: Dirty cleaning solution-Naphtha w/ residual paint chips and pumice sludge

Results: Of the eight cleaners selected, only one showed excellent removal of the contaminant. This product was D-Greeze 500 which the client has already tested. There were three other cleaners that removed over 60% of the contaminant. These products were Super CMF 240, Simple Green and Soy Gold 1000. Table 1 lists each cleaners cleaning efficiencies for each coupon.

Table 1. Cleaning Efficiencies for Coupons

	Buckeye	Chrisal	WR	Star	Sunshine	T-	AG	Solvent
			Grace	Clean	Makers	Square	Environ	Kleene
Coupon 1	5.05	62.57	2.96	48.58	65.53	58.63	76.79	93.44
Coupon 2	45.44	72.80	21.59	36.61	63.18	27.02	73.15	91.92
Coupon 3	40.37	53.46	37.73	53.96	68.73	74.07	61.98	95.96
Ave	30.28	62.94	20.76	46.38	65.81	53.24	70.64	93.77
Std Dev	22.00	9.67	17.40	8.88	2.78	23.99	7.72	2.04

The Chrisal and Sunshine Makers products are both aqueous cleaners used at a low dilution. Increasing the concentration may help to promote a higher cleaning efficiency. Further testing will try various concentrations of each. An increase in time may also benefit the cleaning process for Chrisal, Sunshine and AG Environmental.

Summary:

<b>Substrates:</b>	Aluminum				
<b>Contaminants:</b>	Carbon Deposits, Paints, Dirt				
<b>Company Name:</b>	<b>Product Name:</b>	<b>Conc.:</b>	<b>Efficiency:</b>	<b>Effective:</b>	<b>Observations:</b>
Buckeye International	Shopmaster	5	30.28	<input type="checkbox"/>	
Chrisal USA Inc	Super CMF 240	5	62.94	<input type="checkbox"/>	
Magnaflux	Daraclean 232	5	20.76	<input type="checkbox"/>	
By Pas and Star Products	Star Cleaning Miracle # 50	5	46.38	<input type="checkbox"/>	
Simple Green	Concentrated Industrial Strength Cleaner and Degreaser	5	65.81	<input type="checkbox"/>	

## CLEANING LABORATORY EVALUATION SUMMARY

Tarksol Inc	Tarksol HTF-50	100	53.24	<input type="checkbox"/>	
AG Environmental Products	Soy Gold 1000	100	70.64	<input type="checkbox"/>	
Transene Company, Inc.	D Greeze 500 LO	100	93.77	<input checked="" type="checkbox"/>	

**Conclusion:**

Only one product tested showed excellent removal of the coupons. Three others showed potential for cleaning the coupons. Further testing of these chemistries will be conducted varying concentrations and times.
