

CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2019

DateRun: 12/11/2019

Experimenters: Thalia BracamonteMoreno, Zoe Lawson, Phillip Demers, Othon Pagounes, Tuan Le, Ross Goding

ClientType: Cleaner Manufacturer

ProjectNumber: Project #1

Substrates: Textile

PartType: Coupon

Contaminants: Inks, Dirt, Oil, Food

Cleaning Methods: Low Pressure Spray

Analytical Methods: Light Meter, Visual

Purpose: To evaluate the effectiveness of Cleanyst laundry detergent against Seventh Generation Laundry Detergent in the removal of various soils from cotton, nylon and polyester.

Experimental Procedure: A total of twelve 4"x5" swatches of fabric per cleaner, were contaminated with motor oil, ink, dirt, and mustard. The fabrics used were a white cotton, a purple nylon, and an orange polyester. The soiled coupons were then air dried for 24 hours. The fabrics were then washed at 88° F for 12 minutes separated by cleaner, with a five-minute spin cycle and a nine-minute rinse cycle. Before being taken out of the washer and allowed to dry for 24 hours. A colorimeter was used to take initial, contaminated, and clean measurement values during the experiment.

Equation used: $SRI = 100 - ((L_c - L_w)^2 + (A_c - A_w)^2 + (B_c - B_w)^2)^{1/2}$

SRI = Stain Removal Index (0= No removal and 100 =Complete stain removal)

L=reflectance

A= redness/greenness

B= yellow/blueness

C= unstained fabric, washed in the treatment conditions

W= stained fabric, washed in the treatment conditions

Summary:

Substrates:	Textile				
Contaminants:	Inks, Dirt, Oil, Food				
Company Name:	Product Name:	Conc.:	Efficiency:	Effective:	Observations:
Seventh Generation	Laundry Detergent	1.5 oz		<input type="checkbox"/>	
Cleanyst	Cleanyst Laundry Detergent	1.25 oz		<input checked="" type="checkbox"/>	

Conclusion:

Cleanyst Laundry Detergent was more effective than the comparative product for cleaning and removing stains on white cotton, purple nylon, and orange polyester fabric.
