

# CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2021  
 DateRun: 09/14/2021  
 Experimenters: Zoe Lawson, Nicole Kebler  
 ClientType:  
 ProjectNumber: Project #3  
 Substrates: Ceramics, Plastic, Chrome  
 PartType: Coupon  
 Contaminants: SSL Soil 1 Bathroom Soap Scum  
 Cleaning Methods: Manual Wipe  
 Analytical Methods: Gravimetric, Visual  
 Purpose: To test the effectiveness of Podsy in the removal of SLL Soil 1 Bathroom Soap Scum from various substrates.

Experimental Procedure: Eighteen pre-weighed coupons, three of each substrate per cleaner, were each contaminated with 0.5 grams of bathroom soil (28.6% All-in-one shampoo and conditioner, 21.4% Dry skin lotion, 21.4% Liquid Hand Soap, 14.3% Liquid body wash, 7.2% Deodorant bar soap, 7.1% Water). The coupons were dried for 24 hours at room temperature (68 F). Once dried, the dirty weights of the coupons were recorded. The Podsy solution was then created by placing a solution pod into a spray bottle and filling it with cold water (~50°F). The solution was allowed to sit for 2 minutes and then was shaken to mix the solution parts together. Three coupons of the same substrate were then aligned into a Single Line Washing Unit (SLW) with a Wypall X60 attached to the cleaning sled. Each Wypall X60 cloth and coupon received 2 sprays of the Podsy solution. The Single Line Washing Unit (SLW) was then activated for 20 repetitions, simulating 20 manual wipes. This was repeated for each substrate until all of the coupons were cleaned. The clean coupons were then allowed to dry overnight at room temperature before the final weights were recorded.
