

CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2023

DateRun: 04/05/2023

Experimenters: Amelia Wagner

ClientType: Lab

ProjectNumber: Project #8

Substrates: Stainless Steel

PartType: Coupon

Contaminants: Greases, Lubricating/Lapping Oils

Cleaning Methods: Ultrasonics

Analytical Methods: Gravimetric

Purpose: To evaluate the effectiveness of a FAME + Methyl Lactate mixture (SB-16) in removing several production oils and greases from stainless steel coupons as a potential replacement for TCE using unheated ultrasonics cleaning method.

Experimental Procedure: Three stainless steel coupons were used for each of the five soils being tested for a total of 15 coupons. The initial weights of each coupon were recorded. The bottom third of every coupon was soiled by applying the corresponding soil with a swab. The dirty weights of each coupon were then recorded. The coupons were then subjected to unheated ultrasonics cleaning in a solution of Fatty Acid Methyl Ester 93% + Ethyl Lactate 7% for 15 minutes. After the coupons were cleaned, they were dried with a heat gun for about 2 minutes each. The next morning, the clean weights of each coupon were taken.

Soil	Use	CAS

While each coupon was dried with a heat gun for 2 minutes each, the solvent SB-16 emitted a white vapor in the fume hood.

TURI Cleaning lab	SB-16		92.00	<input checked="" type="checkbox"/>	on soil Oak 529

Conclusion:

SB-16 (Fatty Acid Methyl Ester 93% + Ethyl Lactate 7%) is a very effective cleaner for soils M4, Oak 15C, Oak 15A and Oak 529 if a drying step is feasible. It is an effective cleaner for soil Oak 7a international if a drying step is feasible.
