

CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2023
 DateRun: 09/06/2023
 Experimenters: Tatyanna Moreland Junior
 ClientType: Lab
 ProjectNumber: Project #8
 Substrates: Brass
 PartType: Coupon
 Contaminants: Oil
 Cleaning Methods: Immersion/Soak
 Analytical Methods: Gravimetric

Purpose: To evaluate the effectiveness of SB-22 (79% Ektapro EEP 14% t-butyl acetate 7% propylene carbonate) and SB-24 (92% Ektapro EEP 8% t-butyl acetate) in removing J-2 oil from brass coupons as a potential replacement for TCE unheated immersion cleaning method.

Experimental Procedure: Nine brass coupons were used for each cleaner being tested for a total of 18 coupons. The initial weights of each coupon were recorded. The bottom third of every coupon was soiled by applying the soil with a swab. The dirty weights of each coupon were then recorded. The coupons were then subjected unheated immersion in SB-22 and SB-24 with the stir bar at 240rpm for 15 mins. After the coupons were cleaned they were left to air dry over night. The next morning, the clean weights of each coupon were taken.

Cleaner	Initial weight	Final weight	Percent Removed	Average Percent Removed
SB-22	0.2659	0.0058	97.82	97.91

Substrates:		Brass			
Contaminants:		Oil			
Company Name:	Product Name:	Conc.:	Efficiency:	Effective:	Observations:
TURI Cleaning lab	SB-22	79% Ektapro EEP 14% t-butyl acetate 7% propylene carbonate	97.00	<input checked="" type="checkbox"/>	Left a greasy residue after air drying
TURI Cleaning lab	SB-24	92% Ektapro EEP 8% t-butyl acetate	98.00	<input checked="" type="checkbox"/>	

Conclusion: Both cleaners proved to be as effective as TCE but the coupons immersed in SB-22 had a greasy residue after the 24 hour air dry.
