SCL #: 1996  
 DateRun: 03/08/1996  
 Experimenters: Jay Jankauskas, Sutherland Ramesh  
 ClientType: Coatings Manufacturer  
 ProjectNumber: Project #1  
 Substrates: Stainless Steel  
 PartType: Coupon  
 Contaminants: Adhesive, Coatings  
 Cleaning Methods:  
 Analytical Methods: Gravimetric  
 Purpose: To determine temperature dependence

Experimental Procedure: The purpose of this trial is to determine the temperature dependence of the two terpene chemistries as compared to NMP.  
 Three coupons will be cleaned in 500 ml of each solution at each temperature level (75F, 120F, 160F). Cleaning time will be for thirty minutes, and an acetone rinse will follow. All coupons were prepared and contaminated in the same method as previous experiments.  
 Data for cleaning efficiency at 160F will be imported from Phase II results to avoid redundant testing.  
 SUBSTRATE MATERIAL: 304 Stainless Steel Coupons  
 CONTAMINANTS: Durane Base Coatings #51144  
 CONTAMINATING PROCESS USED: Rubbed on with swab and allowed to cure overnight

Results: NMP- Room Temp
