

# CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 1999  
 DateRun: 09/30/1999  
 Experimenters: Jason Marshall, Nicole Vayo  
 ClientType: Cleaner Manufacturer  
 ProjectNumber: Project #1  
 Substrates: Aluminum, Copper, Nickel, Stainless Steel  
 PartType: Coupon  
 Contaminants: Adhesive, Cutting/Tapping Fluids, Greases, Inks, Lubricating/Lapping Oils, Oil  
 Cleaning Methods: Immersion/Soak  
 Analytical Methods: Gravimetric  
 Purpose: To evaluate client supplied cleaning solution on all listed contaminants and substrates.

Experimental Procedure: The cleaning solution was diluted to 5% using DI water in a 600 mL beaker. The solution was used at room temperature. Coupons were cleaned for five minutes. Rinsing was performed for two minutes using tap water at 120 F and air dried for about two hours also at room temperature. After drying was complete, final weights were recorded and efficiencies were calculated.

SUBSTRATE MATERIAL: 1-Nickel/Copper (202-715); 2-Stainless Steel (202-410 B-85); 3-Aluminum (202-2024 T-3); 4-Ceramic; 5-Steel (202-1010 B-79)

CONTAMINANTS: Table 1 lists the contaminants and the related CAS#s for this trial.

Table 1. Contaminants Cleaned

Contaminant CAS #

Oil 64741-89-5

Lubricant 64742-47-8, 9003-29-6

Ink 67-63-0, 108-88-3, 9004-70-0, 141-78-6, 64-17-5, 109-60-4

Grease 64742-47-8

Adhesive 9010-98-4, 65997-13-9, 68083-03-4, 67-56-1, 1314-13-2, 119-47-1, 108-88-3, 8052-10-6

Results: BioSolve was successful in removing the oil, lubricant, and grease from the coupons' surfaces. The cleaner was not very successful in removing ink. Most of the adhesive was cleaned from the surface. Some foaming was observed during the make up procedure of the solutions. Table 2 lists the percent removal for each contaminant.

Table 2. Cleaning Efficiencies

Contaminant	BioSolve
Oil	100
Lubricant	99
Ink	1
Grease	94
Adhesive	77

Summary:

<b>Substrates:</b>		Aluminum, Copper, Nickel, Stainless Steel			
<b>Contaminants:</b>		Adhesive, Cutting/Tapping Fluids, Greases, Inks, Lubricating/Lapping Oils, Oil			
Company Name:	Product Name:	Conc.:	Efficiency:	Effective:	Observations:
Westford Chemical Corporation	Biosolve	5	100.00	<input checked="" type="checkbox"/>	oil
Westford Chemical Corporation	Biosolve	5	99.00	<input checked="" type="checkbox"/>	lubricant
Westford Chemical Corporation	Biosolve	5	1.00	<input type="checkbox"/>	ink
Westford Chemical Corporation	Biosolve	5	94.00	<input checked="" type="checkbox"/>	grease
Westford Chemical Corporation	Biosolve	5	77.00	<input type="checkbox"/>	adhesive

Conclusion: The cleaner evaluated had success in removing the contaminants recommended by the manufacturer. Higher temperatures and more agitation could improve the results overall and especially for removing the adhesive. The dried ink has been consistently hard to remove in other trials. A different ink may be easier to remove.
