

CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2003
 DateRun: 08/01/2003
 Experimenters: Jason Marshall, Heidi Wilcox
 ClientType: State Agency
 ProjectNumber: Project #2
 Substrates: Ceramics, Fiberglass, Chrome
 PartType: Coupon
 Contaminants: Soaps
 Cleaning Methods: Manual Wipe
 Analytical Methods: Gravimetric
 Purpose: To reevaluate selected cleaners for bathroom cleaning at vendor recommended dilution ratios
 Experimental Procedure: Two supplied cleaning products were diluted to vendor recommended concentration for bathroom cleaning. The products were diluted with DI water. Six preweighed fiberglass, six ceramic and six chrome coupons were coated with SSL Soil 1 (Bathroom soap scum: Vaseline Dry Skin Lotion 21.4%, Dial Clean Rinsing Body Wash 14.3%, Market Basket Shampoo & Conditioner (Pert) 28.6%, Soft Soap Natural Liquid hand soap 21.4%, Coast Deodorant bar soap 7.2% and Water 7.1%) using a hand held swab and allowed to dry for 24 hours at room temperature. The contaminated coupons were weighed again to determine the amount of soil added.
 Three coupons were placed into a Gardner Straight Line Washability unit. A Professional Painter's Rag was attached to the cleaning sled and soaked with 5-7 sprays of cleaning solutions. Each coupon was sprayed 7-10 times with the same cleaning solution. The cleaning unit was run for 20 cycles (~33 seconds). At the end of the cleaning, coupons were wiped once with a dry paper towel. Final weights were recorded. Efficiencies were calculated and recorded.
 Product Dilution Ratio
 Ramsey Free Fall 64:1
 MD Steston LavSafe 64:1

Results: The cleaning solutions had little difficulty with SSL Soil 1 on all three substrates. The table below lists the amount of soil added and removed.
