

# CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2000

DateRun: 07/13/2000

Experimenters: Jason Marshall

ClientType: Bellows Mfr

ProjectNumber: Project #1

Substrates: Aluminum

PartType: Coupon

Contaminants: Lubricating/Lapping Oils

Cleaning Methods: Immersion/Soak

Analytical Methods: Gravimetric

Purpose: To identify safer cleaning solvent for removing oil, lubricant and grease from sub assemblies.

Experimental Procedure: Eight cleaners were selected from the lab's database of effective cleaning and vendor supplied information. All were diluted to 5% by volume using DI water in 600 ml beakers and heated to 130 F on a hot plate. Twenty-four preweighed coupons were coated with the Elf Cut 51 oil using a swab and weighed a second time. Three coupons were immersed in a solution agitated with a magnetic stir bar. Cleaning lasted for 5 minutes and was followed by a 30 second rinse with tap water at 120 F. Drying was performed with a Master Appliance Corp, Hot-air gun model HG-301A for one minute at 500 F. Coupons were weighed a final time and cleaning efficiencies were calculated.

SUBSTRATE MATERIAL: Aluminum Coupons

CONTAMINANTS: Elf Lubricant North America Elf Cut 51 (64742-53-6, 64742-52-5, 63449-39-8, 8016-28-2)

CONTAMINATING PROCESS USED: Lubricant applied using hand held swab

Results: Four cleaners (Heatbath, Today & Beyond, United Laboratories and W.R. Grace) removed over 95% of the oil from the coupons. All but one cleaner averaged over 80% removal of the Elf Cut 51 oil. United Laboratories had the highest efficiency, 99.7%. Table 2 lists the calculated data for the eight cleaners.
