

# CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2006  
 DateRun: 10/10/2006  
 Experimenters: Jason Marshall, Heidi Wilcox  
 ClientType: Lab  
 ProjectNumber: Project #1  
 Substrates: Aluminum  
 PartType: Coupon  
 Contaminants: Carbon Deposits, Greases, Oil  
 Cleaning Methods: Immersion/Soak  
 Analytical Methods: Gravimetric

Purpose: Laboratory evaluations of alternative aerosol cleaning products

Experimental Procedure: Basic cleaning performance testing was conducted using ASTM G122 as the bases for cleaning. Seven products were selected for testing based on equipment compatibility and soil removal. An eight product previously tested was also included. All eight products were diluted to 25% using DI water in 600 ml beakers. Products were used at room temperature. Twenty-four preweighed aluminum coupons were coated with a collection of brake/engine soil collected from an automobile shop. The coupons were allowed to sit for several days before a second weight was recorded. Three coupons were cleaned in each solution for 5 minutes using minimal agitation from a magnetic stir bar. Coupons were then rinsed in tap water for 15 seconds and dried using air blow off at room temperature for 30 seconds. Following drying, final weights were recorded and cleaning efficiencies were calculated.

Results: The table lists the amount of soil added, the amount remaining and the efficiency for each coupon cleaned.

**Conclusion:**

Four of the eight products has moderate success under the conditions tested. These four products will be used in the next phase of testing for aerosol alternatives for brake cleaning.
