

CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2008
 DateRun: 07/09/2008
 Experimenters: Jason Marshall, Heidi Wilcox, Shweta Bansal
 ClientType: Chemical Company
 ProjectNumber: Project #1
 Substrates: Aluminum
 PartType: Coupon
 Contaminants: Resins/Rosins
 Cleaning Methods: Immersion/Soak
 Analytical Methods: Gravimetric, Visual
 Purpose: To evaluate different cleaning parameters for resin cleaning

Experimental Procedure: The top six products from the previous trials were selected based on successful removal of the resin were used at full strength in 300 ml glass beakers. Solutions were used at room temperature. Twenty-four preweighed aluminum coupons were coated with the ECN 809 Base Black resin using a swab. Coupons were weighed a second time to determine the amount of soil added. Three coupons were immersed into each product and cleaned for 60 minutes using no agitation. The coupons were rinsed with tap water for 15 seconds at 68 F and were dried using compressed air blow off 30 seconds at room temperature. Final weights were recorded, and efficiencies were calculated. Coupons also were visually analyzed to determine the level of residue left on the coupons.

Results: All of the products removed more than 98% of the resin from the aluminum coupons. The table lists the amount of soil added, the amount remaining after cleaning and the calculated efficiency for each coupon cleaned.

United Laboratories International	Smart Solve 605	100	99.22	<input checked="" type="checkbox"/>	

Conclusion:

Residues from each of the three rinsing/drying scenarios did not vary significantly from trial to trial. The SC EZ Solv was the most consistent, having been ranked as the lowest residue in 2 of the three trials.
