

CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2002

DateRun: 11/18/2002

Experimenters: Jason Marshall

ClientType: Optical Manufacturer

ProjectNumber: Project #3

Substrates: Plastic

PartType: Coupon

Contaminants: Adhesive, Resins/Rosins

Cleaning Methods:

Analytical Methods:

Purpose: To generate a list of products that can be used to remove acrylic resin adhesives from polycarbonate surfaces

Experimental Procedure: The identified acrylic resin adhesive family identified crosslinks at or above 250 F which is less than the mold temperatures (265-275 F). Acids catalyze this reaction.

Results: Using SSL's Simple Solutions database, two lists of products were generated based on client input. The first are products that have been successfully used to remove adhesives. The second list contains products that meet client's required needs based on from vendor supplied information.

Cleaning projects vary from case-to-case. To obtain more detailed information about any of the products listed, contact the lab at (978)934-3133.

Please note: The Toxics Use Reduction Institute's Surface Cleaning Laboratory can supply MSDSs and any available Technical Data Sheets for all chemical cleaners tested. Not all cleaners tested are ranked equally for environmental, health and safety considerations; some are selected for comparative purposes only. The most accurate, up-to-date information concerning cleaning chemistries can be obtained at the Institute's T.H.E Library using Database TOMES: Toxicological, Occupational, Medical and Environmental Series.
