

# CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2008

DateRun: 10/09/2008

Experimenters: Jason Marshall, Junhee Cho

ClientType: Electronics Manufacturer

ProjectNumber: Project #1

Substrates: Aluminum

PartType: Coupon

Contaminants: Salts

Cleaning Methods: Immersion/Soak

Analytical Methods: Gravimetric

Purpose: To evaluate successful products on second supplied contaminant

Experimental Procedure: The top seven products based on past testing results were again diluted to 5% using DI water in 400 ml beakers. All seven products were heated to 130 F on a hot plate.

Peweighed aluminum coupons were coated with the Everite Electrolite Salt mixture using a handheld swab. The contaminant was allowed to dry for about 10 minutes. Once dry, the coupons were weighed a second time to determine the amount of oil applied.

Three coupons were immersed into each solution and cleaned for 5 minutes using stir-bar agitation. Rinsing was performed for 15 seconds using tap water heated to 120 F and followed by 30 seconds of air blow off with dry compressed air at room temperature. Final weights were recorded, and efficiencies were calculated for each coupon cleaned.

Results: All seven products were effective at removing the salt mixture from the aluminum coupons within 5 minutes of immersion cleaning. The table lists the amount of soil added, the amount remaining and the efficiency for each coupon cleaned.
