

# CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2010

DateRun: 07/27/2010

Experimenters: Jason Marshall, Timothy Weil

ClientType: Cleaning Equipment Mfr

ProjectNumber: Project #1

Substrates: Vinyl Composite Tiles

PartType: Coupon

Contaminants: Hucker's Soil

Cleaning Methods: Manual Wipe

Analytical Methods: Gravimetric, Gloss-Color Meter

Purpose: To determine effectiveness of various cleaning liquids on soiled floor tiles using mechanical equipment.

Experimental Procedure: A set of 21 two inch by four-inch coupons were selected for comparison of seven cleaning alternatives. Coupons were evaluated using gravimetric analysis for weight removal and a BYK Spectro Guide gloss/color meter to determine clean baseline. The coupons were then soiled, and readings were taken to determine the soiled baseline values of tiles previously coated with Hucker's Soil Formulation (Jiffy Creamy Peanut Butter 9.2%, Salted Butter 9.2%, Arrowhead Mills stone ground wheat flour 9.2%, Egg Yolk 9.2%, Evaporated milk 13.8%, Distilled water 45.8%, Printer's ink with boiled linseed oil 0.9%, Shaws saline solution 2.7%).

Three coupons were placed into a Gardner Straight Line Washability unit. An Americo Red Buff floor maintenance pad was installed. Upon the completion of the cleaning, final weights and L-values were recorded. The L-values and gravimetric readings were used to determine how close the cleaned coupon was to the original appearance.

The cleaning process was repeated using hot water (120 F), hot water (140 F), Zep Commercial Neutral Floor Concentrate (1 oz/gallon~0.78%). Zep Commercial Neutral Floor Concentrate @ 5 % concentration in tap water, Commercial Neutral Floor Concentrate @ 10 % concentration in tap water, cold water and electrolyzed water (supplied via an Activelon unit).

Results: The inline cleaning results showed cleaning for each fluid tested. Based on gravimetric and L-value readings, the neutral cleaner at the 10% concentration had the highest removal of soil. Gravimetrically, the electrolyzed water was the next best followed by hot water. The Alkaline cleaner @ 0.78% had the same performance as cold water. The L-value results were not as conclusive. All of the products tested were found to be nearly identical except the top performing product.

Process	Initial wt	Final wt	% Removed	Ave Removal	Rank
Hot water @ 120°F	0.0465	0.0120	74.19	75.63	4
	0.0279	0.0089	68.10

Summary:

<b>Substrates:</b>	Vinyl Composite Tiles				
<b>Contaminants:</b>	Hucker's Soil				
<b>Company Name:</b>	<b>Product Name:</b>	<b>Conc.:</b>	<b>Efficiency:</b>	<b>Effective:</b>	<b>Observations:</b>
Water	Water	100	68.38	<input type="checkbox"/>	
Water	Water	100	75.63	<input type="checkbox"/>	
Water	Water	100	80.27	<input type="checkbox"/>	
Tennent Corporation	Tennent Electrolyzed Water	100	87.65	<input checked="" type="checkbox"/>	electrolyzed water
ZEP Manufacturing Company	Neutral Floor Cleaner Concentrate	10	93.28	<input checked="" type="checkbox"/>	

Conclusion:

The gravimetric analysis compared more closely with the expected outcome of hard floor cleaning than the L-value readings. In both cases, however, the top performing product was identified as being the 10% Neutral cleaner.
