DateRun: 07/17/2003

Experimenters: Jason Marshall

ClientType: Chemical Company

ProjectNumber: Project #1

Substrates: Glass/Quartz, Stainless Steel

PartType: Coupon

Contaminants: Soaps, Salts

Analytical Methods:

Purpose: To generate a list of products that would be suitable for removing buffer residue from glass lined tanks.

Experimental Procedure: Using the laboratory's database, a list of products was generated. This lists consists of products that have been evaluated at SSL under conditions similar to client specific cleaning process.

Results: RESPONSE: The Massachusetts Toxics Use Reduction Institute (TURI) has made the results of the tests conducted at the Institute's Surface Solutions Laboratory into a searchable database format. This should make alternative cleaner selection faster and easier. Here are the results of your query, based on the information supplied.

The table includes the products evaluated at SSL.
