

# CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2004  
 DateRun: 05/04/2004  
 Experimenters: Jason Marshall  
 ClientType: Bicycle Manufacturer  
 ProjectNumber: Project #1  
 Substrates: Titanium  
 PartType: Coupon  
 Contaminants: Cutting/Tapping Fluids  
 Cleaning Methods: Immersion/Soak  
 Analytical Methods: Gravimetric  
 Purpose: To evaluate selected cleaners for removal Moly Dee Tapping fluid

Experimental Procedure: Eight cleaners were selected from the laboratories database of past testing based on supplied data from client. Seven aqueous based and one semi-aqueous based cleaners were diluted to 5% using DI water in 600 ml beakers. All eight products were heated to 120 F on a hot plate. Twenty-four preweighed titanium coupons were coated with client supplied tapping fluid, Castrol Industries Moly Dee Tapping fluid (63449-39-8, 64741-96-4), using a hand held swab and then weighed a second time to determine the amount of soil added. Three coupons were cleaned in each solution for 5 minutes using stir-bar agitation. Coupons were rinsed in tap water for 15 seconds at 120 F, followed by air blow off at room temperature. Once dry, coupons were weighed a final time and efficiencies for each cleaner were calculated.

Results: Three products, Micro 90, Inproclean 3800 and Beyond 2004, removed over 90% of the tapping fluid within 5 minutes. Four products, Aquavantage 1400, SC Aircraft & Metal Cleaner, Metalnox M6314 and Daraclean 282 GF, removed over 80%. The table below lists the amount of soil added, the amount remaining and the efficiency for each coupon cleaned.
