

# CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2004

DateRun: 08/26/2004

Experimenters: Jason Marshall

ClientType: Jewelry Mfr

ProjectNumber: Project #1

Substrates: Brass

PartType: Coupon

Contaminants: Buffing/Polishing Compounds

Cleaning Methods: Immersion/Soak

Analytical Methods: Gravimetric

Purpose: To evaluate drop-in solvents on second supplied contaminant mix.

Experimental Procedure: Eleven products were selected from the previous test results. Each product was used at full strength in 250 ml beakers at room temperature.

Thirty-three preweighed CDA260 Brass coupons were coated with the second supplied buffing/milling compound mix using a hand held swab. Coupons were allowed to sit overnight and weighed a second time to determine the amount of soil added to each coupon. Three coupons were cleaned in each product for 5 minutes with no agitation. Coupons were air dried at room temperature. Once coupons were dry, final weights were recorded and efficiencies were calculated.

Results: All but one product (Vertrel MCA) removed over 80% of the contaminant within 5 minutes using immersion with no agitation. One product, Metalnox M6960 removed just over 90%. The table lists the amount of soil added, the amount remaining and the efficiency for each coupon cleaned.
