

# CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2004  
 DateRun: 09/06/2004  
 Experimenters: Jason Marshall  
 ClientType: General  
 ProjectNumber: Project #1  
 Substrates: Aluminum, Copper, Stainless Steel, Steel  
 PartType: Coupon  
 Contaminants: Coatings, Asphalt  
 Cleaning Methods: Manual Wipe  
 Analytical Methods:  
 Purpose: To generate a list of products that could be used to clean asphalt based coating from equipment  
 Experimental Procedure: Using the laboratory's database for solvent cleaning substitution, the lab generated the following lists of products based on laboratory testing and vendor supplied information.  
 Results: Two companies have worked with the lab in the past for asphalt related cleaning. Copies of those reports have been sent for review. In addition, SSL generated a list of products that are recommended by vendors for cleaning asphalt from various metal surfaces. Based on supplied information about the nature of the parts, ultrasonic cleaning may prove to be an effective and time saving method for cleaning the described parts. The two lists below are for products that can and can not be used in ultrasonic equipment.

Contaminant: Asphalt  
 Substrate: Aluminum, copper, stainless steel and steel  
 Equipment: Ultrasonics

Conclusion:

Cleaning varies from case to case. The SSL recommends process specific testing on potential replacement cleaning chemicals. If more information is needed on a particular product or you are interested in conducting cleaning trials, please contact the lab at (978)934-3133.
