

# CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2005  
DateRun: 07/26/2005  
Experimenters: Jason Marshall  
ClientType: Cleaner Manufacturer  
ProjectNumber: Project #1  
Substrates: Ceramics, Fiberglass, Chrome  
PartType: Coupon  
Contaminants: Films, Soaps  
Cleaning Methods: Manual Wipe  
Analytical Methods: Gravimetric

Purpose: To evaluate supplied products for bathroom cleaning from three substrates.

Experimental Procedure: Two supplied cleaning product were diluted to vendor recommended concentration for bathroom cleaning (2.5%). The product was diluted with DI water. Six preweighed fiberglass, six ceramic and six chrome coupons were coated with SSL Soil 1 (Bathroom soap scum: Vaseline Dry Skin Lotion 21.4%, Dial Clean Rinsing Body Wash 14.3%, Market Basket Shampoo & Conditioner (Pert) 28.6%, Soft Soap Natural Liquid hand soap 21.4%, Coast Deodorant bar soap 7.2% and Water 7.1%) using a hand held swab and allowed to dry for 24 hours at room temperature. The contaminated coupons were weighed again to determine the amount of soil added.

Three coupons were placed into a Gardner Straight Line Washability unit. A Professional Painter's Rag was attached to the cleaning sled and soaked with 5-7 sprays of cleaning solutions. Each coupon was sprayed 7-10 times with the same cleaning solution. The cleaning unit was run for 20 cycles (~33 seconds). At the end of the cleaning, coupons were wiped once with a dry paper towel. Final weights were recorded. Efficiencies were calculated and recorded.

Results: The cleaning solutions had little difficulty with SSL Soil 1 on all three substrates. The table below lists the amount of soil added, removed and the efficiency for each coupon cleaned.
