

CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2005
 DateRun: 07/27/2005
 Experimenters: Jason Marshall
 ClientType: Cleaner Manufacturer
 ProjectNumber: Project #1
 Substrates: Glass/Quartz
 PartType: Coupon
 Contaminants: Calcium/lime
 Cleaning Methods: Immersion/Soak
 Analytical Methods: Gravimetric, Photography
 Purpose: To evaluate supplied products using a low flow rinse.

Experimental Procedure: A lime/water slurry was made by mixing 20 grams of calcium carbonate in 100 milliliters of DI water. The solution was mixed to suspend the calcium carbonate in the water. A plastic swab was used to apply the slurry mix onto nine preweighed mirrored glass coupons. The coated coupons were allowed to dry at room temperature. After the slurry mix was dried, the coupons were weighed again to determine the amount of calcium carbonate that was applied to the coupons. Three coupons were immersed into a 400 ml beaker filled with the supplied cleaning products. The coupons were allowed to sit in the solution for 5 minutes with stir bar agitation at room temperature. In addition to the two supplied cleaners, a beaker with only water was used. At the end of the soaking, the coupons were rinsed in a heated tap water spray from the faucet (120 F) and then were dried using compressed air for 15 seconds at room temperature. Once dry, visual observations were made and the coupons were weighed a final time. Removal efficiencies for each product was calculated.

Results: The tap water spray rinse helped to reduce the amount of residue remaining after cleaning the coupons. The coupons cleaned with the two supplied products looked cleaner than the coupons cleaned with water. The table lists the amount of contaminant added, the amount remaining and the efficiency for each coupon. Photos of the cleaned coupons are also included.

Cleaner	Initial wt	Final wt	% Removed
DFC 23	0.1179	0.0012	98.98
	0.0634	0.0021	96.69
	0.2218	0.0055	97.52
DFC 30	0.1632	0.0034	97.92
	0.2088	0.0031	98.52
	0.1008	0.0056	94.44
Water	0.2095	0.0008	99.62
	0.3660	0.0000	100.00
	0.1637	0.0015	99.08

Summary:

Substrates:	Glass/Quartz				
Contaminants:	Calcium/lime				
Company Name:	Product Name:	Conc.:	Efficiency:	Effective:	Observations:
Cogent Environmental Solutions	DFC 23	100	97.73	<input checked="" type="checkbox"/>	
Cogent Environmental Solutions	DFC 30	100	96.96	<input checked="" type="checkbox"/>	
Water	Water	100	99.57	<input checked="" type="checkbox"/>	

Conclusion: Both DFC 23 and DFC 30 do remove the calcium carbonate, but special attention needs to be given to the removal of the cleaner residue that remains after cleaning.
