SCL #: 2015
 DateRun: 01/22/2015
 Experimenters: Russell Curtis
 ClientType: Cleaner Manufacturer
 ProjectNumber: Project #4
 Substrates: Textile
 PartType: Coupon
 Contaminants: Inks, Oil, Food
 Cleaning Methods: Manual Wipe
 Analytical Methods: Visual
 Purpose: To evaluate supplied product for carpet stain cleaning following CRI TM 110 Section 1.

Experimental Procedure: The purpose of this evaluation was to assess effectiveness of spot and stain removal chemicals by rating the removal of specific staining agents.

Two almond white tufted cut pile test carpet measuring 18 inch by 24 inch were stained with eight staining agents. Each staining agent was applied to the test carpet in triplicate, spaced out at 2.5 inches. The staining agent was applied to the surface using a trigger pump spray bottle capable of delivering 2.5 +/- 0.5 ml of stain mixture. The spray was focused within a staining ring measuring 1.5 inches wide by 1.2 inches high. The eight staining agents included mustard, catsup, coffee, grape juice, black permanent marker (1" diameter circle instead of 2.5 ml), dirty motor oil, AATCC synthetic soil and chocolate syrup. These staining agents were used according to the dilution ratios listed in the table below.

Staining Agent Dilution ratio
 Mustard 1:2 mustard:water
 Catsup 1:3 catsup:water
 Hot Coffee 60 deg +/-3C 1 teaspoon coffee to 175 ml water
 Purple Grape Juice Full concentration
 Black Permanent Marker-Chisel Point N/A
 Dirty Motor Oil 1:1 oil:heptane*
 AATCC Synthetic Soil 0.5 grams/100 ml water
 Chocolate Syrup 1:4 chocolate:water

*heptane used in place of tetradecane

The staining agent mixture was poured into the spray bottle. The nozzle of the bottle was centered inside the staining ring and three pumps of the spray bottle were performed to deliver the 2.5 ml of mixture to the test carpet. The staining ring was left in place until the staining agent was completely soaked into the test carpet. The ring was rinsed in between each staining location. The two completed test carpets were allowed to dry for 48 hours +/- 2 hours before conducting the stain removal procedure.

Following the overnight drying, any excess solid staining agent was removed from the test carpet. The cleaning agent was applied to the surface so that the stain was saturated. The solution was allowed to sit on the stain for 2 minutes. The saturated stain was blotted with a clean dry Kimberly Clark Reinforced wiper towel. Any transfer of the stain/cleaning agent to the towel was noted. Blotting continued until all evidence of liquid transfer was gone. The total number of applications was recorded for each stain. The test carpet was allowed to sit for another 24 +/-2 hours to dry before evaluating the stains. A minimum of three lab personnel were used to evaluate the stain removal efficacy which were then averaged together for the final rating. The evaluations were based on the following scale:

Rating Key
 5 No Stain
 4 Slight Stain
 3 Noticeable Stain
 2 Considerable Stain
 1 Severe Stain
