

CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2012
 DateRun: 08/12/2012
 Experimenters: Junhee Cho, Johnny Le
 ClientType: Cleaning Equipment Mfr
 ProjectNumber: Project #1
 Substrates: Ceramics, Plastic, Stainless Steel
 PartType: Coupon
 Contaminants: Hucker's Soil
 Cleaning Methods: Manual Wipe
 Analytical Methods: Gravimetric

Purpose: To evaluate three supplied products and water for all purpose cleaning

Experimental Procedure: One gram of Tartar was added into 20 fl oz of water (PH 6.5) in supplied spray bottle of Trio then was electronically charged for 3min. after activating, the PH of activated water was changed into 11. The other cleaner was used at full concentration for test.
 Four sets of twelve ceramic, stainless steel, and polycarbonate coupons were weighed and then coated with Hucker's Soil Formulation (JifCreamy Peanut Butter 9.2%, Salted Butter 9.2%, Arrowhead Mills stone ground wheat flour 9.2%, Egg Yolk 9.2%, Evaporated milk 13.8%, Distilled water 45.8%, Printer's ink with boiled linseed oil 0.9%, Shaws saline solution 2.7%) using a hand held swab and allowed to dry for 24 hours at room temperature.
 The contaminated coupons were weighed again to determine the amount of soil added. Three coupons were placed into a Gardner Straight Line Washability unit. A Kimberly-Clark Wypal reinforced paper towel was attached to the cleaning sled and soaked with 5-7 sprays of cleaning solutions. Each coupon was sprayed 7-10 times with the same cleaning solution. The cleaning unit was run for 20 cycles (~33 seconds). Final weights were measured, efficiencies were calculated and recorded.
 Chemistries Evaluated: Trio (1g of Tartar, PH 11), Water (PH 6.5), Clorox Green work All purpose Cleaner, Clorox 409 All purpose Cleaner

Results: Trio and Clorox green work all purpose was effective at removing more than 85% of the Hucker's soil from three type of surface. However, water and Clorox 409 was effective at removing more than 85% of the Hucker's soil from two of the surfaces (stainless steel and polycarbonate) using manual wiping. However, visually, over than 85% of the Hucker's soil on ceramic coupon was removed by Clorox 409 all-purpose cleaner; we suspected that reaming cleaner's foam affect the gravimetric analysis. The table lists the amount of soil added, the amount remaining after cleaning and the calculated efficiency for each of the ceramic, painted steel and polycarbonate coupons cleaned.
