

CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2016
 DateRun: 09/07/2016
 Experimenters: Sabrina Apel
 ClientType: Jewelry Mfr
 ProjectNumber: Project #3
 Substrates: Aluminum
 PartType: Coupon
 Contaminants: Oil
 Cleaning Methods: Immersion/Soak
 Analytical Methods: Gravimetric, Visual

Purpose: To evaluate the effectiveness of various cleaners in removing Marvel Mystery Oil from aluminum.

Experimental Procedure: Four cleaners were tested at room temperature on aluminum coupons to evaluate how Marvel Mystery oil soil was cleaned. Prewieghed coupons were coated with each supplied soil using a hand held swab for each substrate and weighed a second time to determine the amount of soil added. Each cleaner was put in a beaker and three coupons were immersed into the solution for 5 minutes. The coupons were then stood upright to air dry for 15 minutes and then placed on a tray. There was no rinse. Once dry, final weights were recorded and efficiency was calculated for each coupon cleaned.
