

# CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2016  
 DateRun: 11/17/2016  
 Experimenters: Vinh Tran  
 ClientType: Cleaner Manufacturer  
 ProjectNumber: Project #1  
 Substrates: Liquid  
 PartType: Coupon  
 Contaminants: Odor  
 Cleaning Methods: Immersion/Soak  
 Analytical Methods: Smell

Purpose: To evaluate the effectiveness of the supplied cleaners with odor elimination.

Experimental Procedure: Six clean 250 ml glass bottles were filled with 6 ml of whole milk. The bottles were capped and stored at room temperature and allowed to ferment for three days. After the three days a panel of three smelled each of the six bottles for an initial odor evaluation. The two supplied cleaning products were diluted to 50% concentration. Three bottles were treated for each supplied cleaner for three treatment cycles, with each treatment cycle consisting of two sprays of the respective cleaner directly into the bottle. Following each treatment cycle the bottles are swirled and agitated so the cleaner can mix with the cleaner. After each treatment cycle the panelists rated the malodor of the milk in the bottles.

The six milk bottles were treated for a total of three treatment cycles, six sprays overall of each cleaner. The panelists rated the malodor of the milk after each treatment cycle, with a value of 1 defined as the best and a value of 5 on the other end of the spectrum defined as the worst. Subsequently, the six milk bottles were allowed to ferment at room temperature overnight. The same panelists rated the malodor of the milk the following day. The six bottles were then subjected to a final treatment cycle of two sprays of their respective supplied cleaners. The panelists smelled the bottles once again for a final rating. A value of 2 or below is considered effective after the three treatment cycles.

Results:

Cleaner	Post Clean	Original		Average
Bottle 1	5.0	4.0	4.5	4.5
Bottle 2	4.0	3.5	4.5	4.0
Bottle 3	4.0	3.5	4.0	3.8
				% Average: 4.1
Cleaner	Post Clean	Sprays: 2		Average
Bottle 1	4.0	3.5	3.5	3.7
Bottle 2	2.0	2.0	1.5	1.8
Bottle 3	3.0	2.5	2.5	2.7
				% Average: 2.7
Cleaner	Post Clean	Sprays: 4		Average
Bottle 1	3.0	3.0	3.0	3.0
Bottle 2	2.0	1.8	1.5	1.8
Bottle 3	2.5	2.5	1.5	2.2
				% Average: 2.3
Cleaner	Post Clean	Sprays: 6		Average

## CLEANING LABORATORY EVALUATION SUMMARY

Bottle 1	2.0	2.0	2.5	2.2
Bottle 2	2.0	1.0	1.0	1.3
Bottle 3	2.0	2.0	2.5	2.2
				% Average: 1.9
Cleaner	Biological Liquid Odor Control Cleaner	Original		Average
Bottle 1	4.0	3.5	4.5	4.0
Bottle 2	3.0	4.5	4.0	3.8
Bottle 3	3.0	4.0	3.0	3.3
				% Average: 3.7
Cleaner	Biological Liquid Odor Control Cleaner	Sprays: 2		Average
Bottle 1	3.5	3.5	4.0	3.7
Bottle 2	3.0	4.5	4.0	3.8
Bottle 3	2.5	4.0	3.0	3.2
				% Average: 3.6
Cleaner	Biological Liquid Odor Control Cleaner	Sprays: 4		Average
Bottle 1	3.0	3.0	3.5	3.2
Bottle 2	2.0	3.0	3.0	2.7
Bottle 3	2.5	3.0	2.5	2.7
				% Average: 2.8
Cleaner	Biological Liquid Odor Control Cleaner	Sprays: 6		Average
Bottle 1	2.0	2.5	2.5	2.3
Bottle 2	1.5	2.0	2.0	1.8

Summary:

<b>Substrates:</b>	Liquid				
<b>Contaminants:</b>	Odor				
<b>Company Name:</b>	<b>Product Name:</b>	<b>Conc.:</b>	<b>Efficiency:</b>	<b>Effective:</b>	<b>Observations:</b>
Rochester Midland Corporation	PRS Water Damage Post Clean	50		<input checked="" type="checkbox"/>	Partially effective
Fisher Scientific	Absolute Ethanol	0	0.00	<input type="checkbox"/>	
Fisher Scientific	Absolute Ethanol	0	0.00	<input type="checkbox"/>	
Rochester Midland Corporation	Biological Liquid Odor Control Cleaner	50		<input checked="" type="checkbox"/>	Partially effective

Conclusion:

A cleaning agent is considered partially effective if the malodor level is mitigated at least somewhat from its initial malodor rating after the sprays. A ranking value of 1 is considered close to no smell of malodor, while a maximum rating of 5 is considered the worst malodor level. Both cleaners only marginally reduced their initial malodor smell. After the overnight sit, both of the milk bottle sets exhibited a worse malodor rating after spraying than before.
